

Course of Study

The Bachelor's program in Electrical Engineering/Information Technology comprises a total of 7 semesters.

The first four semesters contain technical and mathematical/physical basics.

The fifth semester includes a **practical study semester**.

From the sixth semester onwards, a specialisation has to be chosen:

- **Automation Technology** (with control engineering, drive technology, measuring and sensor technology) or
- **Communication Technology** (with communications engineering, high frequency, microelectronics).

The degree programme will be deepened in two further semesters in the specialist sciences.

In the seventh semester, the course ends with the preparation of the final thesis ('Bachelor's Thesis').
