

Course of Study

The Bachelor's Program in Vocational Education in Electrical Engineering/Information Technology comprises a total of 7 semesters. In addition to technical knowledge, you also acquire knowledge that prepares you for teaching at vocational schools.

The first four semesters contain technical and pedagogical basics. Two school internships will facilitate later decision making for the teaching profession. The fifth semester includes a **practical study semester**. In a further semester, the study programme is deepened in the specialist sciences and at the same time vocational pedagogical and subject didactic contents are taught. In the seventh semester, the course ends with the preparation of the final thesis (Bachelor Thesis).

If the career decision is made after completing this Bachelor's programme for the teaching profession, the Master's programme "**Vocational Training in Electrical Engineering/Information Technology (EI-BB)**" must be connected.
